

Key issues

- Deforestation for shifting cultivation and agricultural expansion
- Soil erosion
- Soil fertility decline
- Declining yield
- Poverty

Objectives

Research partners, provincial governments, extension agents and farms aims to:

- Develop best-practice agroforestry systems
- Improve the availability of high-quality germplasm
- Enhance market access for agroforestry products
- Improve extension methods and policy dialogues

How?

- Testing 10 agroforestry systems
- Germplasm production in smallholder nurseries and station
- Linking smallholder producers to markets
- Capacity development for extension and research
- Agroforestry policy analysis
