TRANSFORMING LIVES AND LANDSCAPES

APPENDIX B. Guide Questionnaire for Key Informants

18 January 2006

Dear Sir:

I am Jessica D. Villanueva of the University of the Philippines in Diliman under the degree course of Master in Science in Geography. Currently, I am conducting my thesis entitled “*Assessing the Role of Landcare in Enhancing the Adaptive Capacity of the Communities in Claveria to Climate Variability.*”

In this light, I would like to ask if I could make use of your time for an interview tomorrow (19 January 2006). The areas to be discussed are as follows:

1. How did Claveria evolved? (land use)
2. How did Landcare help the communities in Claveria
3. What do you think is(are) the climate variability (e.g. typhoons, El Niño, La Niña, etc.) threat in Claveria? When was the last climate extreme? What happened?
4. What are the adaptive measures?
5. How do you prepare the communities in Claveria with regards to this (these) climate variability and extremes?
6. How did Landcare helped in improving the adaptive capacity of the communities to climate variability?

Thank you so much and I am hoping for your full support. Rest assured that my study will be for the benefit of the Communities in Claveria.

Sincerely Yours,

JESSICA D. VILLANUEVA
